

Sarnico Spider Perla

To round off the success of the Spider, Cantieri di Sarnico will present the new "PERLA" version at the Genova Boat Show characterised by a provocative livery and exotic finishings. The model is complete with an unprecedented white body but as with true pearls, the value is not merely measured by how bright they are, but by the shape, the lustre and the many translucent layers.

In order to highlight the sporting nature of the boat the sides are complete with a dark brown line realised with a very special painting. The same dark and brilliant tones are used for the upholstery on deck and illustrate the exclusivity of the boat and the modernity of its styling.

The light and the colours give the boat its lines as much as the fiberglass structure does, adding great value to the shape designed by Nuvolari and Lenard. In addition, the colour of the accessories, furniture and bridge are painted in order to give a chromatic contrast.

The cockpit deck of the "Perla" is realized with large and impressive teak strips separated with white lines. The layout of the lower deck is the same as the original version but uses carefully selected bamboo in order to distinguish it from the standard version.

Other stylistic changes include polished ebony wood in the kitchen, leather floor and white polished overhead lockers.

The hull is conceived by Victory Design considering all their racing experience making the boat agile and extremely in order to optimize its trim without any need for corrections by the pilot. With twin Volvo Penta D6 Turbodiesel Common Rail 435 hp engines, the maximum speed is nearly 40 Knots and because of the new Joystick system the Spider is very easy to moor regardless of the conditions.
