

Sarnico Grande: performance beyond expectations

The new flagship gives emotion by the beauty of the shape designed by Nuvolari-Lenard, inspires admiration for the elegant interior and surprises by the extraordinary comfort and speed.

The hull design and propulsion system, signed by Victory Design, and the care with which the boat was built using dynamometric cells to verify the correct weight distribution, have led to a perfect trim of the yacht in any condition. Sarnico Grande get on plane starting from 12 knots, cruises at the economy speed of 20 knots for at least 430 mile range and reach a top performance at 42 knots.

These excellent results were obtained using a lower power than the one normally used by other yachts of the same type and dimension.

The test has also highlighted a fundamental characteristic, typical of all models of the shipyard, as the ability to navigate comfortably in every situation, even on the rough sea and even at high speed.

The assembly of technical equipment, as well as the whole construction and the furniture, were also treated to get the best acoustic comfort.

The first model was launched with the "command bridge", a helm station on the upper deck, accessible via a retractable carbon ladder.

The Grande has a large outdoor space, not only at the bow, but also at the stern, where the living and the sun pad cover a very large area which can be modulated by a different position of the window door.

On the lower deck, the owner can also choose a different layout. Normally, there are the kitchen, the owner's suite in the middle, the Vip cabin at the bow and two guest cabins on the sides.

The comfort of any area is the result of a meticulous simulation of habitability developed through the creation of a full-scale mock-up.

New soft fabric linen gives freshness and charm inside as well outside.

The owner's cabin is spread over the entire beam, is illuminated by panoramic windows and includes a large bathroom and a dressing room, while another room, free for any use, is close to the cabin.

There is a high level of comfort and luxury in the three guest cabins which have bathroom "en suite" and are filled with natural light that comes both from the portholes and the skylights through the bridge.

The process of treating timber is carried out by the famous carpenters of the shipyard, skilled in searching the best woods, cutting it in the right way and finishing it in order to give continuity to the veins through the bulkheads, the doors and the furniture as if it was a work of art.

The salon is huge and to make it very comfortable has been furnished exclusively as a lounge / living room.

The kitchen is equipped with professional appliances, is located below deck and is connected to the main deck with an independent stairs and to the lower deck through a door.

From the helm, the view is clear in every trim condition and two doors, one for each side, lead outside quickly.

The application of home automation simplifies the management of the yacht and the led lighting system minimizes energy consumption.

Today, the style and the quality Sarnico cruise with the "greatest" boat of the range that delivers value through the technology, the design, the decor and the performances of "first class".
